

## CyberOptics to Demo SQ3000™ Multi-Function System with Advanced Software at APEX

**Minneapolis, Minnesota** — January 2020 — [CyberOptics® Corporation](#) (NASDAQ: CYBE), a leading global developer and manufacturer of high-precision 3D sensing technology solutions, will showcase its [SQ3000™ Multi-Function](#) for AOI, SPI and CMM in Booth #3113 at the 2020 IPC APEX EXPO, scheduled to take place Feb. 4-6, 2020 at the San Diego Convention Center in California. Additionally, CyberOptics will demonstrate the latest 3D AOI software with ultra-fast programming capabilities, auto tuning and enhancements that significantly speed setup, simplify the process, reduce training efforts and minimize operator interaction.

The 3D SQ3000 all-in-one system can identify critical defects and measure critical parameters, providing a superior process control solution for effective yield management. In addition to AOI and SPI applications, highly accurate coordinate measurements can be attained faster than a traditional Coordinate Measurement Machine (CMM) – in seconds, not hours. The [world's first in-line CMM](#) includes an extensive software suite for metrology grade measurements on all critical points.

Powered by proprietary Multi-Reflection Suppression (MRS) sensor technology, the 3D SQ3000 all-in-one system offers an unmatched combination of speed, resolution and accuracy. The MRS sensor meticulously identifies and rejects reflections caused by shiny components making it an ideal technology solution for a wide range of applications with stringent requirements. The Ultra-High Resolution MRS sensor option delivers superior performance ideally suited for socket metrology, microelectronics and other applications where an even greater degree of accuracy and inspection reliability is critical.

### About CyberOptics

CyberOptics Corporation ([www.cyberoptics.com](http://www.cyberoptics.com)) is a leading global developer and manufacturer of high-precision 3D sensing technology solutions. CyberOptics' sensors are used for inspection and metrology in the SMT and semiconductor capital equipment markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the Company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of key vertical markets. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: market conditions in the global SMT and

semiconductor capital equipment industries; trade relations between the United States and other countries; the timing of orders and shipments of our products, particularly our 3D MRS-enabled AOI systems; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics and semiconductor markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives; the market acceptance of our SQ3000 3D CMM system, products for semiconductor advanced packaging inspection and metrology and CyberGage360 product; costly and time consuming litigation with third parties related to intellectual property infringement; and other factors set forth in the Company's filings with the Securities and Exchange Commission.
