

CyberOptics Recognized for Powerful CyberCMM™ Software for the World's First In-Line CMM at Productronica China

Minneapolis, Minnesota — July 2020 — [CyberOptics® Corporation](http://www.cyberoptics.com) (NASDAQ: CYBE), a leading global developer and manufacturer of high-precision 3D sensing technology solutions, announces that it was awarded a 2020 EM Asia Innovation Award in the category of Test Equipment-Testing Software Suite for its CyberCMM™. The award was presented to the company during a ceremony that took place July 3, 2020 at the National Exhibition and Convention Center in Shanghai.

CyberCMM™, a comprehensive software suite of coordinate measurement tools provides highly accurate, 100 percent metrology-grade measurement on all critical points much faster than a traditional CMM, including coplanarity, distance, height and datum X, Y to name a few. A fast and easy set-up can be performed for programming complex applications as compared to a slow, engineering resource-intensive set-up that typically requires multiple adjustments with traditional coordinate measurement machines (CMMs).

“The ability to identify critical defects and measure critical parameters is increasingly important for our customers to maximize yields, increase productivity and improve processes,” said Dr. Subodh Kulkarni, President and CEO, CyberOptics. “Incorporating the highly accurate CMM functionality in-line saves tremendous time. We’re honored to receive this award that echoes the positive feedback we receive from our customers.”

The CyberCMM suite augments the latest 3D AOI software that is used with the Multi-Reflection Suppression™ (MRS™)-enabled SQ3000™ Multi-function system for AOI, SPI, and CMM, or the SQ3000-CMM system. Customers value the ultra-fast programming capabilities, auto tuning and enhancements that significantly speed set-up, simplify the process, reduce training efforts and minimize operator interaction.

Established in 2006, the EM Asia Innovation Awards program strives to recognize and celebrate excellence in the Asian electronics industry, inspiring companies to achieve the highest standards and push the industry forward.

About CyberOptics

CyberOptics Corporation (www.cyberoptics.com) is a leading global developer and manufacturer of high-precision 3D sensing technology solutions. CyberOptics’ sensors are used for inspection and

metrology in the SMT and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the Company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of key vertical markets. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: a possible world-wide recession or depression resulting from the economic consequences of the Covid-19 pandemic; the negative effect on our revenue and operating results of the Covid-19 crises on our customers and suppliers and the global supply chain; market conditions in the global SMT and semiconductor capital equipment industries; trade relations between the United States and other countries; the timing of orders and shipments of our products, particularly our 3D MRS-enabled SQ3000 Multi-Function systems and MX systems for memory module inspection; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics and semiconductor markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives; the market acceptance of our SQ3000 Multi-Function inspection and measurement systems and products for semiconductor advanced packaging inspection and metrology; costly and time consuming litigation with third parties related to intellectual property infringement; the negative impact on our customers and suppliers due to past and future terrorist threats and attacks and any acts of war; and other factors set forth in the Company's filings with the Securities and Exchange Commission.
