**CyberOptics to Expand Product Portfolio with New SPI and AOI System at APEX 2010 MINNEAPOLIS — March 2010** — CyberOptics Corporation (Nasdaq: CYBE) announces that it will introduce its newest SPI and AOI systems in booth 2271 at the upcoming IPC/APEX conference and exhibition, scheduled to take place April 6-8, 2010 at the Mandalay Bay Resort & Convention Center in Las Vegas.

**SE350™** is the latest addition to CyberOptics' 3-D solder paste inspection system portfolio. The simple and robust SE350 design with CyberOptics calibration-free sensor technology offers the lowest cost of ownership in the industry with zero machine-to-machine variation across the production lines. Leveraging on the technology of SE500, this system is capable of inspecting pad sizes down to 01005 component size (150 x 150 µm).

The **AOI QX500** combines a unique image acquisition solution to provide yet another industry-leading, high-speed inspection solution. The QX500 represents a quantum leap in inspection technology, system design and speed, with improved cycle times. The introduction of SIM enables the system to offer 'on-the-fly' inspection, setting it apart from conventional inspection methods.

The team at CyberOptics is excited and looking forward to demonstrating the technology innovations behind these two systems at booth 2271.
