

CyberOptics Showcases Highly Efficient and Effective Wireless Airborne Particle Sensors at SEMICON China

APS2 technology incorporates a wider range of particle sizes in sensors that speed processes and improve yields

Minneapolis, MN— March 8, 2017 — CyberOptics® Corporation (NASDAQ: CYBE), a leading global developer and manufacturer of high precision 3D sensing technology solutions, announces it will demonstrate its latest Airborne Particle Sensor technology (APS2) with an extended particle size range at SEMICON China, March 14-16th at the Shanghai New International Expo Center in booth #5775, 1459 and 5330.

CyberOptics' WaferSense® and ReticleSense® APS2 portfolio speeds equipment set-up and long-term yields in semiconductor fabs by wirelessly detecting, identifying and monitoring airborne particles in real-time. CyberOptics APS2 sensors have proven to deliver up to 88% timesavings, 95% expense reduction and up to 20X the throughput with half the manpower relative to legacy surface scan wafer methods.

The APS2 portfolio now measures a greater range of particle sizes, with the industry-leading accuracy and sensitivity valued by semiconductor fabs and equipment OEMs.

"Equipment engineers at fabs around the world rely on our wireless Airborne Particle Sensors as the documented Best Known Method (BKM)." said Dr. Subodh Kulkarni, President and CEO, CyberOptics. "Our APS2 devices save them significant time, expense and improve their yields."

At SEMICON China, CyberOptics will also demonstrate its WaferSense and ReticleSense Auto Multi Sensors (AMS/AMSR) that measure leveling, vibration, and relative humidity (RH) in an all-in-one wireless real-time device. The thin and light form factor enables the AMS to travel through virtually any tool and the AMSR can capture multiple measurements in all locations of the reticle environment. The all-in-one devices are yet another way to increase yield and reduce downtime in semiconductor environments.

About the WaferSense and ReticleSense Line

The WaferSense measurement portfolio including the Auto Leveling System (ALS), the Auto Gapping System (AGS), the Auto Vibration System (AVS), the Auto Teaching System (ATS), the Airborne Particle Sensor (APS), the advanced Airborne Particle Sensor (APS2) and the new Auto Multi Sensor (AMS) are available in various wafer shaped form factors depending on the device, including 150mm, 200mm and 300mm wafer sizes. The ReticleSense measurement portfolio including the Airborne Particle Sensor (APSR & APSRQ) and next-generation APS2, the Auto Leveling System (ALSR) and the Auto Multi Sensor (AMSR) are available in a reticle shaped form factor.

About CyberOptics

CyberOptics Corporation (NASDAQ: CYBE) is a leading global developer and manufacturer of high precision sensing technology solutions. CyberOptics sensors are being used in general purpose metrology and 3D scanning, surface mount technology (SMT) and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of its key vertical segments. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: market conditions in the global SMT and semiconductor capital equipment industries; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives; the success of CyberGage360; and other factors set forth in the Company's filings with the Securities and Exchange Commission.
